

## Kaneka Sunduren™ SD

**Kaneka Sunduren™SD** is a range of high-end quality PMMA films with a thickness ranging from 50 to 150 µm; designed for specific applications like:

### Window profile decorative foil

Laminated on the PVC film, Sunduren assures an optimal weatherability, prevents plasticiser migration and provides anti-stickiness against dirt.

### Retro-reflective sheeting

The special colored SD films are used for traffic and road safety signalisation and offer a good balance between optical properties, scratch resistance and processability.

### Car interiors

A range of high purity, scratch resistant SD films are designed for insert or in-mold decoration for automotive parts.

### Other applications

SD films are as well used in the following example applications:

- PC corrugated panels
- Door panels
- Printed advertisement
